

# Tranz It!™

## Transfer Medium

TranzIt will transfer printed images onto a variety of surfaces. It can be used on metal, plastic, clay, wood, paper, fabric and more. TranzIt makes the perfect tool for personalizing gifts and trinkets. The possibilities are endless.

**Rub-Ons:** Begin with ink jet prints on TranzIt Sheets™ or transparencies. Apply a thin, even coat of TranzIt™ to the printed side of the transparency. We like to use our fingers, but a paintbrush works too.

While TranzIt™ is wet, apply piece to a coated cardstock (MatteKote™ works great). Evenly rub or burnish over the top of the transparency in several directions, not too hard or you could squeeze out the print.

Wait about 5 minutes. Carefully pull off the transparency. Add a few small stamp images to create a little texture. Micro Glaze™ is advisable for the final finish since the Rub-On method can take time to set up.

**Basic Application:** Apply 3 layers of TranzIt™ (horizontal, vertical and diagonal) to a laser printed image and to the surface your image will be transferred. Let dry between layers. Let both parts dry completely.

Place TranzIt sides together. Iron to heat set transfer. Trim away any excess paper.

Immerse piece in water for about 1 minute. Carefully peel away paper by rolling with your finger. Be sure to gently rub away all paper. Let piece dry. Apply a thin coat of Diamond Glaze to help the clarity of transferred image.

Basic application of TranzIt™ to metal.

Rub-On method of TranzIt™ onto ATCs.
